WORK EXPERIENCE

Software Engineer

12/2024 – PRESENT

Jung International LLC | [Website](#)

- Disrupted the marketing industry with revolutionary field cards, a two way communication achieved through NFC cards to make networking more personal again.
- Developed a social media platform that removes the complications of setting up an account before posting, making the backend open source on the front end.
- Created slide cards which are a mobile only design that allows users to present disruptive technology combining the traditional method of values, features, benefits with modern tech.
- Handled corporate espionage, hackers, amongst other attacks on my company to secure our culture and freedom.

Entrepreneur, Brand Strategist

03/2018 – 12/2025

Rumi Design and Technology | [Website](#)

- Created an effective process to streamline communication across design and development.
- Built a company, through prospecting and cold calling; then learned how to design, develop and host my own websites to give the client a competitive advantage in their marketplace.
- Accomplished successful delivery of 40+ client projects, across many industries.
- Sourcing global resources, identified and secured global design and dev resources to assist in each of the projects.

TECH PROJECTS

Resonance Machine | [Source](#)

Built a sound wave machine to help with body and brain health.

- Find a specific Hz for the desired state of mind you would like to reach and click play.

Book | [Source](#)

A modern tarot card guide for entrepreneurs to help them on their path.

- Click guide me and find over 200 original quotes designed to guide you on your journey,

My Images {Save Storage} | [Source](#)

An image database

- Upload image and then use the link on your website or blog for site speed to be optimal.

Resume Maker | [Source](#)

Built a resume builder to apply for jobs ;).

- The builder runs through a checklist of essentials needed to qualify for a software engineer position.
- You can edit the builder easily like a word doc, yet more simple and download the pdf to share.

Genius Anonymous | [Source](#)

Created a brand strategy for the future of America

- <https://www.geniusanonymous.org/portfolio>; Mapped out a blueprint to help earth become a fun place to play again to become again like a child ;).

My company was born in adversity, as I started out with a \$1,000 credit card loan. I had to learn how to prospect, sell, design, develop, and host websites by myself. Through diligent networking and cold calling, I identified several website prospects. I quickly recognized the need to partner with both a designer and a developer to keep up with the demand. I met my design partner through a logo design contest. I then went through several developers to find the one I felt most comfortable with. He stood out because of his skills and work ethic. Together, we successfully delivered 40+ client projects across multiple industries over the past 8 years.

Through this experience, I learned that the hardest part in delivering high quality solutions to our clients was bridging the communications gap between design and development - oil and water; getting them on the same page. Initially, my role was focused on prospecting, helping clients develop their brand strategies, and selling websites and applications. But given the critical need to align design and development, I then focused on strengthening my technology and software development skills in order to enhance the communications between our team. In March of this year, I attained certification as a Software Engineer through a program at TripleTen. I've learned that I really enjoy software development and am interested in pursuing a position with a development focus that can benefit from my skills and experiences.
